The Reality of ESP Russell Targ 2012-12-19 On February 4, 1974, members of the Symbionese Liberation Army kidnapped nineteen-year-old newspaper heiress Patricia Hearst from her Berkeley, California apartment. Desperate to find her, the police called physicist Russell Targ and Pat Price, a psychic retired police commissioner. As Price turned the pages of the police mug book filled with hundreds of photos, suddenly he pointed to one of them and announced, "That's the ringleader." The man was Donald DeFreeze, who was indeed subsequently so identified. Price also described the type and location of the kidnap car, enabling the police to find it within minutes. That remarkable event is one reason Targ believes in ESP. Another occurred when his group made \$120,000 by forecasting for nine weeks in a row the changes in the silver-commodity futures market. As a scientist, Targ demands proof. His experience is based on two decades of investigations at the Stanford Research Institute (SRI), which he cofounded with physicist Harold Puthoff in 1972. This twenty-million dollar program launched during the Cold War was supported by the CIA, NASA, the Defense Intelligence Agency, and Army and Air Force Intelligence. The experiments they conducted routinely presented results could have happened by chance less than once in a million. Targ describes four types of experiments: Remote Viewing, in which a person describes places and events independent of space and time. For example, while in California Price drew to scale a Soviet weapons factory at Semipalitinsk with great accuracy later confirmed by Satellite photography. In another remote viewing, Targ accurately sketched an airport in San Andreas, Columbia himself. Distant Mental Influence, where the thoughts of the experimenter can positively or negatively affect the physiology (heart rate, skin resistance, etc.) of a distant person. Whole field isolation, where someone in a state of sensory isolation accurately describes the visual experiences of someone else in another place. Precognition and retrocausality, showing that the future can affect the past. That is, the elephant you see on television in the morning can be the cause of your having dreamed about elephants the previous night. Final chapters present evidence for survival after death; explain how ESP works based on the Buddhist/Hindu view of our selves as nonlocal, eternal awareness; discuss the ethics of exercising psychic abilities, and show us how to explore ESP ourselves. "I am convinced," Targ says, "that most people can learn to move from their ordinary mind to one not obstructed by conventional barriers of space and time. Who would not want to try

that?"

Rules of Play Katie Salen Tekinbas 2003-09-25 An impassioned look at games and game design that offers the most ambitious framework for understanding them to date. As pop culture, games are as important as film or television—but game design has yet to develop a theoretical framework or critical vocabulary. In Rules of Play Katie Salen and Eric Zimmerman present a much-needed primer for this emerging field. They offer a unified model for looking at all kinds of games, from board games and sports to computer and video games. As active participants in game culture, the authors have written Rules of Play as a catalyst for innovation, filled with new concepts, strategies, and methodologies for creating and understanding games. Building an aesthetics of interactive systems, Salen and Zimmerman define core concepts like "play," "design," and "interactivity." They look at games through a series of eighteen "game design schemas," or conceptual frameworks, including games as systems of emergence and information, as contexts for social play, as a storytelling medium, and as sites of cultural resistance. Written for game scholars, game developers, and interactive designers, Rules of Play is a textbook, reference book, and theoretical guide. It is the first comprehensive attempt to establish a solid theoretical framework for the emerging discipline of game design.

Zen of Drawing Peter Parr 2015-09-17 Zen of Drawing inspires you to pick up a pen, pencil or an iPad and start drawing what you see with a 'zen' approach. Author Peter Parr has spent his career in animation successfully teaching people to draw and encouraging students to nurture their skills through observational drawing. He advocates a fresh way of looking closely at your subject and enlisting an emotional response, in order to fully appreciate the nature of what you are about to draw. You will learn that whatever you are drawing, it is essential not only to copy its outline but also to ask yourself: is it soft, smooth or rough to the touch? How heavy is it? Is it fragile or solid? Then, having grasped the fundamental characteristics, or zen, of the object, make corresponding marks on the paper – crisp textures, a dense wash, a scratchy or floating line. The chapters cover: keeping a sketchbook; tools (pen, pencil, charcoal, watercolour and iPad); perspective; line and volume; tone and texture; structure and weight; movement and rhythm; energy, balance and composition.
